With nimble fingers and immense concentration, Neelima Vasudevan from Kerala, Hage Sonia from Arunachal Pradesh and Shubhabrata from West Bengal are unravelling antiquities from the all- important excavation site at the Purana Quila.

It has been an extraordinary experience for them and 15 other final years students of the institute of Archaeology, who have been visiting this ancient site from March 1 to put their textbook- acquired knowledge to practical use. For the uninitiated it may seem all fun and games but the students have a different perspective for them, working with a dedicated team of labourers at the excavation site, part of their 2 year course, and means that they have an important Mandate from the Archaeological survey of India to fulfil by this month end.

"On the first day, I was clueless about how I would handle such a complex world because the ASI's mandate was to locate the Mahabharata site," said Neelima Vasudevan. The students have till now excavated a series of potteries, coins and other artifacts which are of immense Archaeological significance as they shed light on the history of cultural heritage of the bygone era and the economical wealth of that period.

"As the ASI seeks to establish the existence of Indraprastha and show evidence of the Mahabharata period at the ongoing excavation site at Purana qila, this excavation is not only a learning process but also an act of responsibility," she said.

" So far we have not been able to discover painted grey ware and our training is concluding on March 31. We have evidence of Mauryan artefacts in the area and till now, we have discovered pottery relating to the kushan period." But Neelima and other students are confident that if they dig deeper they would certainly stumble upon painted grey ware and prove the existence of Indraprastha, the kingdom of the Pandavas.

Gleaming with delight, Hage Sonia, who was bid a tearful Farewell by her family at Itanagar in Arunachal Pradesh, said her discovery of 18 coins has given her the necessary confidence to pursue archaeology as a career.

"Only a few students from Arunachal or the North East take up archaeology. The reason being that in our region there is demand for engineers and doctors. I know that every day spent here would help me when I become a professional archaeologist, she said.

Global Warming: A Growing Concern

Global warming refers to the long-term rise in Earth's average temperature due to human activities. One major cause is the excessive emission of greenhouse gases, such as carbon dioxide and methane, into the atmosphere. These gases trap heat, leading to a phenomenon known as the greenhouse effect.

According to a recent report by the United Nations, the Earth's temperature has increased by 1.1°C since the pre-industrial era. Scientists warn that if the global temperature rises by 1.5°C or more, it could lead to catastrophic consequences, including rising sea levels, extreme weather events, and loss of biodiversity.

Deforestation is another contributing factor to global warming. Trees absorb carbon dioxide, but large-scale deforestation has reduced their ability to act as carbon sinks. Additionally, the burning of fossil fuels for energy contributes significantly to the release of greenhouse gases.

To combat global warming, individuals and governments must take action. Using renewable energy, promoting afforestation, and reducing waste can help mitigate the effects of climate change. International agreements like the Paris Accord aim to limit global temperature rise and encourage sustainable development.
