Early one winter morning, Riya visited her grandparents' village. A thin layer of fog covered the green fields, and tiny drops of dew shone on the grass like pearls. The air was fresh and cool, carrying the sweet smell of flowers. Birds chirped happily from the mango trees, welcoming the new day. Riya felt calm and excited at the same time because the village was so different from the noisy city she lived in.

After breakfast, her grandfather took her for a walk near a small river. The water flowed gently, making a soft, soothing sound. Farmers were already working in their fields, and some children were flying colorful kites in the open sky. Riya noticed how everyone greeted each other with warm smiles. She realized that life in the village was simple but full of joy.

In the evening, the sky turned orange and pink as the sun slowly disappeared behind the hills. Families gathered outside their homes, sharing stories and laughter. The Red Panda is a small mammal that lives in the cool forests of the Himalayas and parts of China and Nepal. It has reddish-brown fur, a long bushy tail, and a white face that makes it look very attractive. Red pandas spend most of their time in trees and are excellent climbers. During the day, they usually rest on branches and become active in the early morning and evening.

Bamboo is the main food of the red panda, but it also eats fruits, roots, eggs, and insects. These animals prefer to live alone and are mostly quiet. Their thick fur protects them from the cold weather in the mountains. Sadly, red pandas are now endangered because people are cutting down forests and destroying their natural habitat.
